

RE: 03-104

I have great concerns about interference to the Amateur Radio bands by broadband over power lines (BPL). Amateur radio operators already have to endure interference on VHF from cable systems. I strongly feel that if BPL is allowed, it will raise static and interference levels on the HF bands to the point that HF will not be usable in Cities served by BPL, therefore possibly limiting use of HF for emergency communications. Please do not allow this to happen.

Sincerely,
Patrick Roberson, KG7HT
